Std IX Social Science

SURE QUESTIONS FOR EXAMINATIONS

1.ON THE ROOF OF THE WORLD

1.Which mountain range is known as'the Roof of the World'?

Pamir Knot

2. Identify the Mountain ranges that originate from the Pamir Knot and list them.

• Kunlun •Tian Shan •Hindukush • Karakoram.

3.What are the features of Northern Mountain ranges?

⊙ The relatively young and lofty northern mountain ranges have been formed by the folding of rock layers.

⊙ The Northern mountain extends from River Indus in the west to River Brahmaputhra in the east.

⊙ For nearly 2400 km and has a width ranging from 150 to 400 km.

⊙ The region has a peculiar landscape with several high peaks, glaciers and valleys.

Write a brief note on Trans Himalayas

.• The northern most division of the Trans Himalayas is also known as the Tibetan Himalayas.

• Having an average elevation of 3000 metres, the Trans Himalayas has an approximate width of 40 km and a length of 965 km.

• The Karakoram range connects Himalayas with the Pamir Knot.

#

Karakoram, Zaskar, Ladakh and Pir Panjal mountain ranges in Trans Himalayas. (First Term Exam -2024)

4. Write a brief note on Trans Himalayas

.• The northern most division of the Trans Himalayas is also known as the Tibetan Himalayas.

• Having an average elevation of 3000 metres, the Trans Himalayas has an approximate width of 40 km and a length of 965 km.

• The Karakoram range connects Himalayas with the Pamir Knot.

Mountain ranges that originate from the Pamir Knot and list them.

• Kunlun •Tian Shan •Hindukush • Karakoram.

Karakoram, Zaskar, Ladakh and Pir Panjal mountain ranges in Trans Himalayas. **(First Term Exam -2024)**

5.Three parallel mountain ranges together form the Himalayas.Which are they? Expain (Second Term Exam -2024)

The Shiwalik Range- which is the southern most of the Himalayan ranges and forms the borders of the Ganga Plains, has a width ranging from an average of 60 to 150 km. • As it is the outer most part, this range is also known as the Outer Himalayas.

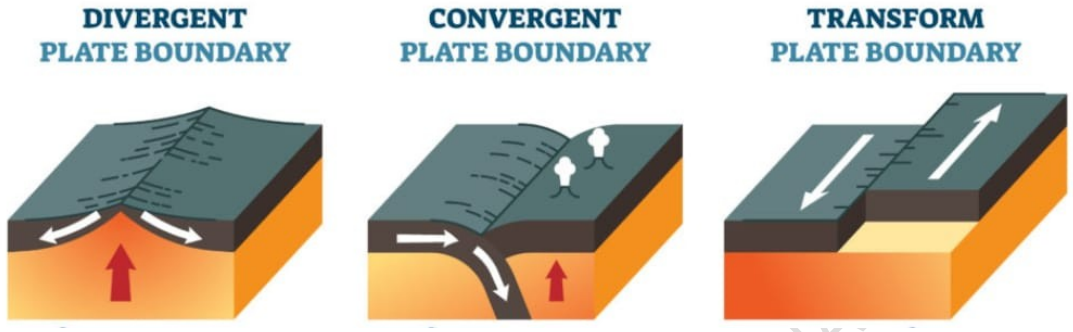

The Himachal mountain range- To the north of the Shiwaliks, is the Himachal mountain range, with an average elevation ranging from 3500 to 4500 metres above the mean sea level. • This range is also known as the Lesser Himalayas and has a ranging

SURE QUESTIONS FOR EXAMINATIONS

from 60 to 80 km. And has a width from 60 to 80 km.

The Himadri- The Himadri, which is also known as the Greater Himalayas or the Inner Himalayas, is the mountain range that lies at an average elevation of about 6100 metres above the mean sea level. • The width of the range is nearly 25 km. These are snow-clad mountains. • Most of the world's highest peaks are situated in this range.

6.Name the three Plate boundaries. In which plate boundary was the Himalayas formed (Annual Exam -2026) (First Term Exam -2024)

•Convergent Boundary	Boundaries where plates move towards each other.
• Divergent Boundary	Boundaries where plates move away from each other
• Transform(Shear) Boundary	Boundaries where plates slide past each other.• In Convergent Boundary was the Himalayas formed

7. Write the regional divisions of the Himalayas?

@ Western Himalayas @ Central Himalayas @ Eastern Himalayas

8.Write the three regional divisions of the Himalayas and the rivers that separate them. (First Term Exam 2024)

Himalayan Zone	Separating Rivers
Western Himalayas	Indus, Kali
Central Himalayas	Kali, Teesta
Eastern Himalayas	Teesta, Brahmaputhra

9.Describe the features of Kashmir Himalaya? (First Term Exam -2025)

• The Kashmir Himalaya and Himachal Himalaya include in western himalaya.

•The Kashmir Himalaya which extends over nearly 3.5 lakh sq.km in Jammu and Kashmir and Ladakh region is roughly 700 km long and 500 km wide.

• The important mountain ranges of Kashmir Himalaya containing snow covered peaks, valley and hill ranges are Karakoram, Zaskar, Ladakh and Pir Panjal.

• Mount K2 (Godwin Austin-8611 metres), the second highest peak in the world, is situated in the Karakoram range.

• Siachen, Boltoro etc. are the important glaciers of this region.

• These glaciers help the River Indus and its tributaries, such as Ravi, Jhelum and Chenab

SURE QUESTIONS FOR EXAMINA

• The freight and passenger movement on either side of the mountains is made possible through the mountain passes.
• Passes are the comparatively easier natural passages in the mountainous terrains. Banihal Pass across the Pir- Panjal Range that connects Jammu with the Kashmir Valley is an example.
• There are numerous fresh water lakes in the Kashmir Himalaya and Dal Lake is important among them. Srinagar is situated on the banks of this lake.
• Margs are meadows formed along the mountain slopes during the summer season.
* Margs are meadows formed along the mountain slopes during the summer season.
* As these margs get covered under snow during winter, the region attracts tourists for winter games such as skiing. Sonmarg and Gulmarg are examples
• As these margs get covered under snow during winter, the region attracts tourists for winter games such as skiing, Sonmarg and Gulmarg are examples
10.What are the features of Himachal Himalaya? (First Term Exam -2025)
⊙ The major share of Himachal Himalaya is the state of Himachal Pradesh.
⊙ Chenab, Ravi and Beas are the important rivers in this mountainous region
⊙ Dhowladhar and Pir Panjal are the mountain ranges in this region.
⊙ Several freshwater lakes like Chandratal and Surajtal are found in these mountain ranges.
⊙ The Baralacha La Pass that connects Himachal Pradesh with Ladakh and Rohtang Pass that connects Kulu Valley with Lahul and Spiti Valleys are the important passes in Himachal Himalaya.
⊙ Beautiful valleys such as Kulu. Kangra and Lahul and tourist centres such as Shimla and Manali attract numerous tourists.
⊙ In these places where snowfall and mild winters are experienced, hot springs places can also be seen at a few places
11.Explain Uttarakhand Himalaya- (First Term Exam -2025)
$ Nandadevi, Kamet, Badrinath, Kedarnath . Glaciers and freshwater lakes situated in Uttarakhand .
$ The Gangotri and Yamunotri glaciers Freshwater lakes - Nainital and Bhimtal .Dunes also peculiarity of this region.
$ The flat valleys seen in between the Lesser Himalayas and the Shiwalik hill ranges are Duns.
$ Dehradun in Uttarakhand 'Bugyals'are seen here .
$ The alpine summer meadows along the higher altitude mountain slopes are called 'Bugyals'. Eg:- Dayara Bugyal, Gorson Bugyal
12.Write short note on Purvachal Region?
> The Himalaya mountains hills having an average elevation from 500 to 3000 metres above mean sea level are known as Purvachal Hills.
> Of these the most important are the Patkaibum, the Naga Hills, the Mizo Hills and the Manipur Hills.
> Cherrapunjii and Mawsynram located here receive the highest rainfall in the world.
13.Tabulate Mountain passes - (Annual Exam -2025)
Banihal Pass- Connects jammu & Kashmir valley
see qn number 2

SURE QUESTIONS FOR EXAMINATIONS

14.Indus,Ganga, and Brahmaputra rivers along with their tributaries, create the Himalaya drainage system.Justify (First Term Exam 2024)

➢ Indus,Ganga, and Brahmaputra rivers along with their tributaries are rainfed and snow fed, they are perennial (water rich) throughout the year.

➢ These rivers have turbulent flow in their mountainous course.

➢ Flooding and channel deviation are common in the plains.

➢ These rivers create land forms such as V-shaped valleys, gorges and waterfalls

Indus	River originates from Bokharchu glacier in Mansarovar Lake
Ganga	originates from Gangotri Glacier at Gaumukh.
Brahmaputra	originates from located from Chemayungdung glacier Mansarovar Lake in Tibet.

15.Write a brief note on the climate of the Himalayan mountain zone ? (First Term Exam - 2025)

◌ The Himalayas, forming India's northen boundary along with the other continuous mountains together makes a climatic divide between the Indian Subcontinent and Central Asia.

◌ The climate of the Himalayan mountain zone varies according to the elevation and the topography of the respective parts of the region.

◌ Mild climate prevails along the lower mountain slopes and the Shiwalik foothills. ◌ But at higher elevations, it will be considerably low temperature and winter climate conditions at extremely high altitudes and in the Ladakh region, Pole-like extreme winter climate is experienced.

◌ South West Monsoon rains are received along the southern slopes of the Shiwalik ranges and the North Eastern India. Snowfall is common in the higher regions of the mountains.

◌ The Monsoon winds blowing from the Bay of Bengal get trapped in between the Assam Himalayas and the Purvachal Hills.

◌ As a result, most of its moisture reaches back to earth as rain. Hence, the North Eastern India, especially the Meghalaya Plateau, receives heavy rainfall

16.Give a brief account on Soil in Himalayan regions/ Northern mountain ranges (First Term Exam -2025)

* Mountain soil and forest soil are commonly seen in the Himalayan terrain. The soil texture and particle size vary according to mountain environment.

* Fine grained soil with high humus content are seen in the valleys

* In the high slopes, coarse grained soil with low humus content can be seen. Alluvial deposition is mainly seen in the valleys.

* Glacial sediment deposited in the Kashmir Valley is Karewas. Which soil is ideal for saffron cultivation. It is humus-rich fine soil .

17.Brief description about natural vegetation in Himalayan region? (First Term Exam - 2025)

◌ Differences in factors like elevation, topography, soil type and climate lead to regional variations in natural vegetation in the Himalayan terrain.

◌ As the average annual rainfall received is above 200 cm, more tropical evergreen vegetation is found in the Eastern Himalayas and the North Eastern Hills.

◌ Temperature decreases with altitude and the corresponding change is also visible in the

SURE QUESTIONS FOR EXAMINATIONS

natural vegetation of the Himalayan Mountain region.

- Depending on the changes in the altitude, a spectrum of natural vegetation from evergreen forests to the vegetation type of the cold climates such as Tundra can be found here.
- Semi-evergreen and deciduous forests are seen in the valleys and the lower mountain slopes.
- Moist deciduous forests are seen at altitudes ranging from 1000 to 2000 metres.
- Coniferous tree varieties such as pine and deodar grow more along the mountain slopes.
- Shrubs such as junipers and rhododendrons grow at higher altitudes whereas in the highest altitude, alpine meadows are seen.

18.What are Margs?(First Term Model Qn paper) see qn number 9

19.As the geographical conditions are favourable, the entire Himalayan region has become a zone with high economic potential for tourism.Justify (First Term Exam -2025)(First Term Exam -2024)

Phase 1	* Travels associated with pilgrimage were what initiated the development of tourism in these regions. * There are several pilgrim centres in this region such as Kailas, Manasarovar, Amarnath and Hema Kund Sahib. * These places have been attracting travellers for centuries.
Phase 2	* Began in the 19th century when the British identified the area's favourable climate. * The resort towns such as Shimla, Darjeeling, Shillong, Almora, Ranikhet, Mussoorie and Nainital are important tourist centres.
Phase 3	* Began in the Himalayan region after the conquest of Mount Everest by Sherpa Tenzing Norgay and Edmond Hillary on 29th May 1953. * Today the adventure tourism sector promoting Mountaineering, Paragliding, skiing etc. has developed significantly in this region
